# DANIEL ORIFICE PLATES AND PLATE SEALING UNITS

## Quality Beyond Compare

Exceptional performance and superior durability are the hallmarks of Daniel Orifice Plates and Plate Seals. These simple yet effective differential pressure measurement solutions have been serving the oil and gas industry for more than 90 years and remain one of the most widely used technologies. Today, additional plate and seal options are available to ensure measurement accuracy and improved longevity in challenging measurement conditions.

Standard Daniel plate offerings include universal and dual vulcanized seal (DVS) plates for use with Daniel Orifice Fittings. Standard paddle-type plates are also available for use in Daniel Orifice Flange Unions. Plates can be ordered in standard stainless steel or optional Monel, Inconel and other exotic materials to improve durability. To prevent leakage, a variety of plate seal materials are available for universal plates, including nitrile (NBR) and PTFE, that help improve performance and durability in certain applications.

Every Daniel orifice plate is manufactured to ensure compliance with industry standards as well as to meet specific application requirements. For optimal performance, the plate bore must be properly sized and beveled. Standard plates have a 45° bevel on the periphery of the bore hole which offers optimal conditions for clean, dry gas or low viscosity liquids. For dirty gas or other challenging fluid types, special plate designs help improve measurement accuracy, including plates with segmental, quarter-round, and counter bores. In addition, the nominal plate bore of every Daniel Orifice Plate is inspected prior to shipment using a Coordinate Measurement Machine (CMM) to validate its compliance with AGA 3/API 14.3 and/or ISO 5167. From material selection to final packaging, every step of plate production is controlled and documented.

Table 1: Plate Tolerance (specific tolerances that apply to most Daniel orifice plates)	
<b>Edges</b>	Square and sharp, and will not reflect a beam of light when viewed without magnification
<b>Finish</b>	≤ 30 micro-inch roughness
<b>Flatness</b>	Flat within 0.010-in, per inch of dam height (where dam height equals the pipe diameter minus the orifice diameter, divided by 2)
<b>Bore</b>	Plate bore tolerances comply with AGA 3/API 14.3, ASME, ISO, ISA, etc. or per customer requirement

## Typical Applications

- Custody transfer of oil and gas
- Allocation Measurement

## Application Sites

- Pipelines including transmission and distribution
- Offshore / onshore production
- Gas processing plants
- Large industrial sites

## Features and Benefits

- Precision machining along with superior quality control heighten measurement accuracy and reliability
- Highly accurate flow measurement can be determined without the need for calibration
- Simple to operate and easy to troubleshoot in the field
- No moving parts ensure minimal maintenance
- Low cost of ownership

Figure 1: Daniel orifice plates

Daniel plates ensure accurate measurement and comply with AGA3/API 14.3, ISO or per customer requirements where applicable.

# STANDARD SPECIFICATIONS

Please consult a Daniel technical specialist if application requirements are outside of the listed specifications. Other product and material offerings may be available. Please consult factory.

## Plate Specifications

### Types of Orifice Plates

- Model 500 Universal Plate
- Model 510 Universal 3DVS Plate
- Model 520 Paddle-Type Plate
- Other (consult factory)

### Types of Orifice Plate Holders For Ring Type Flange Unions

- Model 560 Holder with integral plate
- Model 590 Holder with removable plate

### Bore Type

- Concentric (Bore and bevel)(1)
- Concentric (Bore and no bevel)
- Bore and counter bore
- Segmental
- Eccentric
- Quadrant round
- Blank
- Other (consult factory)

### Plate Thickness

- 3.2 mm to 12.7 mm (0.125-in to .5-in)(2)
- Other (consult factory)

## Measurement Standard

- AGA 3/API 14.3
- ISO 5167
- Other (consult factory)

## Mechanical Ratings

### Line Sizes

- DN10 to DN900 (0.25-in to 24-in)(3)
- Other (consult factory for larger sizes)

### Pressure Rating

- PN25 to PN200 (ANSI 150 to 2500)

### NACE and PED Compliance

- Consult factory

## Material Specifications

### Plate and Plate Holder

- 316 SS
- Optional: 400, C-276 and other materials

### Plate Seals

- NBR (Nitrile)
- HNBR
- FKM
- Optional: PTFE
- Other (consult factory)

**Table 2: Daniel Plate Identification**  
(information stamped on each Daniel plate by model number)

(1) Bevel as needed per the standard

(2) Refer to the weights and dimensions information to confirm the thickness by plate type and size.

(3) Line size varies by model.

# ORIFICE PLATE OPTIONS

Please consult a Daniel technical specialist if application requirements are outside of the listed specifications. Other product and material offerings may be available.

## Accuracy

- Discharge coefficient uncertainty 0.5 to 0.75%
- Orifice plates are one part of a flow measurement system. Daniel orifice plates are manufactured to meet the requirements of industry standards but must be installed and maintained per the standards. Discharge coefficient uncertainties when used correctly will be according to those published in the standards API 14.3, AGA #3, and ISO 5167.

## Orifice Bore Calculation

Accurate calculation of the orifice plate bore is essential to measurement accuracy. To ensure precise calculation and manufacturing, one of our technical experts will provide the orifice bore calculation form that will need to be completed by the customer.

**Table 3: Orifice Plates**

Table 3: Orifice Plates	
<p><b>Model 500</b></p> 	<p>Line Sizes 2 to 24 inch</p> <p>Universal orifice plates originated by Daniel are the standard used in many industries. When combined with Daniel sealing units, the universal style is used in Daniel orifice fittings. The universal size is the most economical style of orifice plate because of low initial cost, small storage space required, and the elimination of stocking plates for various pressure ratings.</p>
<p><b>Model 510</b></p> 	<p>Line Sizes 12 to 24 inch</p> <p>For larger sized fittings, these universal plates are sealed with bonded rubber seals. The permanently bonded rubber creates a secure seal around the plate. Plates with damaged seals can be returned to the factory for repair.</p>
<p><b>Model 520</b></p> 	<p>Line Sizes 1/2 to 24 inch</p> <p>Daniel paddle type orifice plates are used with raised face orifice flange unions. These are the most widely used flow measurement elements in the world. The plate is machined to match line and flange rating. The handle provides identification and information while installed.</p>
<p><b>Model 560</b></p> 	<p>Line Sizes 1/2 to 24 inch</p> <p>Orifice plate holders provide a paddle style orifice for RTJ flange unions. The 560 is an integral plate holder made with a non-removable orifice plate to eliminate bypass leakage around the plate. RTJ plate holders provide an excellent self-centering installation that does not rely on flange bolting for location.</p>
<p><b>Model 590</b></p> 	<p>Line Sizes 2 to 24 inch</p> <p>590 plate holders are used in conjunction with 500 plates for use in RTJ flange unions. Plates can be economically changed without replacement of the plate holder. Holding screws are used to secure the plate to the holder. A gasket is provided as a seal between the plate and holder. Orifice plates are not included and must be ordered separately.</p>

## ORIFICE PLATE SEALING UNITS OPTIONS

Five types of sealing units are available for use with the Daniel Catalog No. 500 orifice plates.

**Table 4: Orifice Plate Sealing Units**

Table 4: Orifice Plate Sealing Units							
<p><b>DSC Dual Seal</b></p> 	<p>Line Sizes 2 to 16 inch</p> <p>The Daniel Dual Seal is the most simple and practical orifice plate sealing device for normal flowing streams. It is precision molded and provides four metal-to-metal sealing surfaces 360° around the plate. The units positively seal against both outer faces of the plate and against both seat faces of the orifice fitting to prevent leakage. The DSC is interchangeable with Daniel TSC and MSC seal units.</p> <p><b>Specifications</b></p> <table border="1"> <thead> <tr> <th>Materials</th> <th>Maximum Working Pressure</th> <th>Process Temperature Limits</th> </tr> </thead> <tbody> <tr> <td>70-80 shore nitrile synthetic rubber FKM fluoroelastomer</td> <td>600 ANSI</td> <td>-20 to +275° F</td> </tr> </tbody> </table>	Materials	Maximum Working Pressure	Process Temperature Limits	70-80 shore nitrile synthetic rubber FKM fluoroelastomer	600 ANSI	-20 to +275° F
Materials	Maximum Working Pressure	Process Temperature Limits					
70-80 shore nitrile synthetic rubber FKM fluoroelastomer	600 ANSI	-20 to +275° F					
<p><b>DVS Dual Seal</b></p> 	<p>Line Sizes 12 to 24 inch</p> <p>In larger sizes, rubber is bonded directly to the outer edge of the orifice plate. If damaged, the DVS seal and plate may be returned to the factory for revulcanizing. Universal plates with bonded seal are Model 510.</p> <p><b>Specifications</b></p> <table border="1"> <thead> <tr> <th>Materials</th> <th>Maximum Working Pressure</th> <th>Process Temperature Limits</th> </tr> </thead> <tbody> <tr> <td>80-90 shore nitrile synthetic rubber FKM fluoroelastomer</td> <td>600 ANSI</td> <td>-20 to +275° F</td> </tr> </tbody> </table>	Materials	Maximum Working Pressure	Process Temperature Limits	80-90 shore nitrile synthetic rubber FKM fluoroelastomer	600 ANSI	-20 to +275° F
Materials	Maximum Working Pressure	Process Temperature Limits					
80-90 shore nitrile synthetic rubber FKM fluoroelastomer	600 ANSI	-20 to +275° F					
<p><b>SSR Snap Seal Ring</b></p> 	<p>Line Sizes 2 to 24 inch</p> <p>The Daniel Snap Seal Ring is a removable orifice plate holder designed for use in services where elastomer seals are not recommended due to swelling or chemical compatibility. The Snap Seal Ring unit consists of two symmetrical metal rings, each one having an O-ring on both sides for a positive seal on the plate side and the fitting side of the ring. These rings center and secure the orifice plate between them. The assembled unit provides a full 360° rubber to metal seal around both sides, even in the absence of any pressure differential. No special tools are required for assembly or disassembly.</p> <p><b>Specifications</b></p> <table border="1"> <thead> <tr> <th>Materials</th> <th>Maximum Working Pressure</th> <th>Process Temperature Limits</th> </tr> </thead> <tbody> <tr> <td>Zinc plated carbon steel 316 stainless steel Duplex</td> <td>2500 ANSI</td> <td>-20 to +275° F (Standard O-rings - NBR, HNBR, FKM) 316 stainless steel 2500 ANSI -67 to +437° F (Speciality O-rings - Consult factory)</td> </tr> </tbody> </table>	Materials	Maximum Working Pressure	Process Temperature Limits	Zinc plated carbon steel 316 stainless steel Duplex	2500 ANSI	-20 to +275° F (Standard O-rings - NBR, HNBR, FKM) 316 stainless steel 2500 ANSI -67 to +437° F (Speciality O-rings - Consult factory)

Zinc plated carbon steel 316 stainless steel Duplex	2500 ANSI	-20 to +275° F (Standard O-rings - NBR, HNBR, FKM) 316 stainless steel 2500 ANSI -67 to +437° F (Speciality O-rings - Consult factory)					
<p><b>TSC PTFE Seal</b></p> 	<p>Line Sizes 2 to 24 inch</p> <p>The Daniel PTFE seal is a superior orifice plate sealing unit for difficult, corrosive flows and for higher temperatures. The TSC has proven effective in such flows as dilute sulfuric acid, fuming nitric acid, hydrazine and other unusual fluids. The two piece unit consists of an inlet ring which fits around the plate outer diameter, and a downstream ring fitted with metal clips for assembling the unit. A special lip on this ring plus an annular groove provides compression to effectively seal off the plate. The TSC unit can be assembled or taken apart by hand.</p> <p><b>Specifications</b></p> <table border="1"> <thead> <tr> <th>Materials</th> <th>Maximum Working Pressure</th> <th>Process Temperature Limits</th> </tr> </thead> <tbody> <tr> <td>PTFE Size 10 inch &amp; larger have graphite added for lubricity and ease of movement.</td> <td>2500 ANSI</td> <td>-56 to +275 F max</td> </tr> </tbody> </table>	Materials	Maximum Working Pressure	Process Temperature Limits	PTFE Size 10 inch & larger have graphite added for lubricity and ease of movement.	2500 ANSI	-56 to +275 F max
Materials	Maximum Working Pressure	Process Temperature Limits					
PTFE Size 10 inch & larger have graphite added for lubricity and ease of movement.	2500 ANSI	-56 to +275 F max					
<p><b>MSC Metal Seal</b></p> 	<p>Line Sizes 2 to 12 inch</p> <p>The Daniel Metal Seal is a stainless or zinc plated carbon steel clip ring assembly recommended for high pressures and for temperatures up to +275 F. The assembly consists of an upstream and downstream ring. The MSC seal unit can be assembled or taken apart by hand. Product not intended for custody transfer.</p> <p><b>Specifications</b></p> <table border="1"> <thead> <tr> <th>Materials</th> <th>Maximum Working Pressure</th> <th>Process Temperature Limits</th> </tr> </thead> <tbody> <tr> <td>Zinc plated carbon steel 316 stainless steel</td> <td>2500 ANSI</td> <td>-20 to +275° F</td> </tr> </tbody> </table>	Materials	Maximum Working Pressure	Process Temperature Limits	Zinc plated carbon steel 316 stainless steel	2500 ANSI	-20 to +275° F
Materials	Maximum Working Pressure	Process Temperature Limits					
Zinc plated carbon steel 316 stainless steel	2500 ANSI	-20 to +275° F					

# ORIFICE PLATE BORE OPTIONS

A variety of specialized orifice plate bores are available to meet application requirements. Please consult with a Daniel technical specialist to confirm the most suitable bore for your application.

Bore and Bevel (Concentric)	Bore without Bevel (Concentric)	Bore and Counterbore
 <p>The bore and bevel is the standard method of limiting the plate edge thickness. The bevel is machined on a 45° angle to the desired edge thickness. Unless otherwise specified the plates will be beveled to leave an edge thickness 1/50 of the line ID or 1/8 of the orifice bore, whichever is smaller.</p>	 <p>For certain combinations of line size and plate thickness, it is not necessary to have a bevel to meet plate edge thickness requirements. In this case, the bore is drilled straight through the entire thickness of the plate. This bore is also used for bi-directional measurement and restriction orifices.</p>	 <p>The bore and counterbore is a special method to limit the plate edge thickness. Instead of beveling at the normal 45° angle, the plate is counterbored to the desired edge thickness.</p>
Segmental Bore	Eccentric Bore	Quarter Round Bore (Quadrant Edge)
 <p>Segmental bore orifice plates are provided for measurements to allow solids, liquids, and bubbles to pass through the bore. The circular portion of the bore is manufactured to be tangent to 98% of the pipe ID. Several industries use this type of bore, including sewage treatment, steel, chemical, water conditioning, paper and petrochemical.</p>	 <p>Eccentrically-bored plates position the bore off-center as opposed to concentrically. The bore of the eccentric orifice is generally inscribed in a circle that is 98% of the pipe ID, enabling solids or slurries to pass through the bore. Eccentric orifice plates are used in many industries, including heavy and light chemicals, steel, paper, atomic and petrochemical.</p>	 <p>The quarter round, or quadrant bore, offers a rounded inlet edge. The radius of the quarter round bore is a function of the orifice-to-pipe ratio with thickness at the throat equal to the radius. Overall plate thickness is frequently greater than the thickness of standard plates. This bore is specifically designed for fluids of high viscosity, including heavy crudes, syrups and slurries. Quarter round bores are recommended for viscous fluids with Reynolds numbers below 10,000.</p>

# WEIGHTS AND DIMENSIONS

The Plate Dimension diagram (Figure 2) demonstrates the plate component measurements that correspond to A and B in Tables 5A and 5B below. All weights are based on the dimensions provided for blank plates.

# WEIGHTS AND DIMENSIONS

The Plate Dimension diagram (Figure 3) demonstrates the plate component measurements that correspond to A and B in Tables 6A and 6B below. All weights are based on the dimensions provided for blank plates.

## Universal 3DVS Orifice Plates: Model 510

DN300 (12-in) and larger Universal orifice plates may include a synthetic rubber sealing unit (i.e. DVS) that is bonded to both sides of the plate, providing a non-metallic seal in the orifice fitting body seat. Dimension A in the chart above includes this seal. Plates with the 3DVS seal are standard for most applications in line sizes DN300 (12-in) and larger. Other types of seals are available for use with Series 500 plates in these line sizes.

Figure 3: Plate Dimension Diagram for Universal 3DVS Orifice Plates

**Table 6A: Weights and Dimensional Data (Metric Units)**

# DIMENSIONS AND API RING NUMBERS

The Plate Dimension diagrams (Figures 5 and 6 on page 11) demonstrate the plate component measurements that correspond to A, B, and C in Table 9A and and Table 11. All weights are based on the dimensions provided.

## Ring-Type Joint (RTJ) Orifice Plate Holders: Models 560 and 590

The Daniel Model 560 is an intergral plate holder & Daniel Model 590 ring-type joint (RTJ) orifice plate holders are fitted with Universal orifice plates (Model 500) and are used with RTJ orifice flange unions. Holding screws secure the plate in the holder, and there is a gasket between the plate and the holder. The orifice plate is not included and must be ordered separately.

Model 560 plate holders are available in all sizes and ring numbers. Model 590 plate holders are available in DN50 (2-in) and larger in all ring numbers with the exception of DN50 (2-in) R-23 and DN65 (2.5-in) R-26 API ring numbers. Consult factory for other sizes, materials, ANSI ratings and special flange ratings.

**Table 10A: Standard Plate Thickness (Metric Units)**

Ring-Type Joint (RTJ) Plate Holders (Models 560 and 590)	
Plate Size (DN) <sup>(2)</sup>	Thickness (mm)
DN15 to DN150	3.2 mm
DN200 to DN350	6.4 mm
DN400 to DN500	9.5 mm
DN600 to Larger	12.7 mm

**Table 10B: Standard Plate Thickness (US Customary Units)**

Ring-Type Joint (RTJ) Plate Holders (Models 560 and 590)	
Plate Size (in) <sup>(2)</sup>	Thickness (in)
0.5 to 6 inch	0.125 inch
8 to 14 inch	0.25 inch
16 to 20 inch	0.375 inch
24 inch and Larger	0.5 inch

(1) Approximate gap refers to the approximate distance between the flanges.  
 (2) DN50 to DN150 (2-in to 6-in) Model 560 plate holders have 6.4 mm (0.25-in) thick plates as standard; add 3.2 mm (0.125-in) to the A dimension and approximate gap for Model 560 holders in these sizes.  
 (3) The oval form is standard.

## DANIEL ORIFICE PLATE SELECTION OPTIONS

The following table is intended to provide orifice plate option for each plate category.

Table12: Orifice Plate Options with codes						
Code	Line Size	Model 500	Model 510	Model 520	Model 560	Model 590
50	1/2 inch			X	X	
75	3/4 inch			X	X	
1	1 inch			X	X	
05	1 1/4 inch			X	X	
15	1 1/2 inch			X	X	
02	2 inch	X		X	X	X
25	2 1/2 inch	X		X	X	X
03	3 inch	X		X	X	X
04	4 inch	X		X	X	X
06	6 inch	X		X	X	X
08	8 inch	X		X	X	X
10	10 inch	X		X	X	X
12	12 inch	X	X	X	X	X
14	14 inch	X	X	X	X	X
16	16 inch	X	X	X	X	X
18	18 inch	X	X	X	X	X
20	20 inch	X	X	X	X	X
24	24 inch	X	X	X	X	X
XX	Other	CF	CF	CF	CF	CF
Plate Holder Style						
A	Oval				X	X
B	Octagonal				X	X
Bore Type						
A	Bore & Bevel (Concentric)	X	X	X	X	
B	Bore & no bevel (Concentric)	X	X	X	X	
C	Bore & Counter Bore	X	X	X	X	
D	Segmental	X	X	X	X	
E	Eccentric	X	X	X	X	
F	Quadrant round	X	X	X	X	
G	Blank	X	X	X	X	
X	Other	CF	CF	CF	CF	
Bore Treatment						
SB	Stellite Bore Edge	X	X	X	X	
NA	None	X	X	X	X	
Vent/Drain						
V	Vent	X	X	X	X	
D	Drain	X	X	X	X	
B	Vent & Drain	X	X	X	X	
N	None	X	X	X	X	
Plate Thickness						
18	1/8 inch	X		X		X
14	1/4 inch	X	X	X	X	X
38	3/8 inch	X	X	X	X	X
12	1/2 inch	X	X	X	X	X
01	01-1/4 inch with 1/8 recessed edge	X				
02	02-3/8 inch with 1/4 recessed edge	X				
03	03-1/2 inch with 3/8 recessed edge	X				
XX	Other	CF	CF	CF	CF	CF

Table12: Orifice Plate Options with codes (continued)

Code	Plate Finish	Model 500	Model 510	Model 520	Model 560	Model 590
A	≤ 30 micro-inch roughness			X		
B	Serrated face 125 to 250 RMS			X		
X	Other			CF		
<b>Handle Dimensions</b>						
A	Standard			X		
B	Other			CF		
<b>Material of Construction of Plate</b>						
M1	316/316	X	X	X		
M3	Monel 400	X	X	X
